

Research Bazaar Queensland

6-7th Nov 2024 - ACU Brisbane

About ResBaz Queensland

A festival of digital research

ResBaz is more than a conference - it's a two-day festival of digital research training, where researchers from all disciplines come together to learn new skills in an interactive, collaborative and above all fun setting. Featuring workshops, talks, discussion sessions, networking and plenty of social activities, ResBazQld provides participatory training spanning nearly fifty different topics of cutting-edge digital research tools and techniques.

In 2024, ResBazQld is now in its eighth year! In the spirit of a marketplace or bazaar, ResBaz is a highly participatory event where researchers from

many different disciplines can learn, share knowledge and skills, and have fun!

Who should attend? Researchers at ALL levels from ALL disciplines. PhD candidates, research masters students and early career researchers are especially encouraged to attend. Research technologists and research software engineers who support researchers to do their job should also come along! Sessions at this year's ResBaz will offer a brief practical introduction to a broad selection of topics and tools related to digital research practice relevant across the disciplines.

ACU, Brisbane campus is set in beautiful surrounds and is just 12 km north of the city centre. There is free parking and public transport opportunities (<https://www.acu.edu.au/locations/brisbane>).
